

New 'Ojo Vision' Video Phone

by: Kristofer Brozio Published 11/05 - 2010

There's just something about video phones and video calling that I don't care for... then again I don't care much for talking on a phone either, but I've got no choice there, we live in a very connected time after all. WorldGate though has just introduced a new video phone that's got some decent specs like 7" LCD, CMOS camera with auto focus and even a dual core TI DaVinci chipset powering the phone. Would you have thought we'd need dual cores in our phones? Availability is listed as 'the near future', so whatever that means...

Ojo Vision Digital Video Phone features include:

Highest Quality Video:

Seven-inch digital color 16:9 TFT LCD (800 x 480 high-resolution), fully backlit and adjustable

CMOS sensor camera with auto focus, auto exposure and high/low light sensitivity

TI DaVinci digital video dual-core chipset with advanced video/audio codec implementation

Real-time adaptive bandwidth with configurable bit rates from 80kbps to 1Mbps

Innovative Bonus Features:

Screen Saver/Digital Photo Frame allows users to display favorite photos and images when the phone is not in use

Connect to a large screen LCD/TV/projector for expanding viewing possibilities

Future enhancements will include powerful three-way video conferencing capabilities

Advanced Telephony Capabilities:

Complete feature suite including three-way calling, caller ID, call waiting, call forwarding, auto attendant, speed dial and more

FXS Telephone Port provides digital integration for existing household phones

NAT transversal technology for zero configuration and plug-and-play installation

Intuitive multi-language graphical user interface
